

Alert → Bubble Action Flow

How each detected change maps to a Bubble create or update — and what gets pushed to the Newsreel knowledge backend.

- CREATE

New record in Bubble
- UPDATE

Modify existing record
- NEWSREEL

Push to Newsreel / Knowledge Admin

EVENTS

 **New Event**

CREATE

Event
group, event type,
core date fields

Meeting → date/time, call-in URL

Request for Comment →
comment
period
end date

Adopted Guideline → effective date

 **Event Details Changed**

UPDATE

Event
any field — time,
location, dates, call-in

 **Event Cancelled**

UPDATE

Event
status → Cancelled

MATERIALS & DOCUMENTS

 **New Material / Document Posted**

CREATE

Library Item(s)
one per document — any type

UPDATE

Event
link new library items + append agenda items

Covers agendas, minutes, RFCs, exposure drafts, presentations, adopted guidelines, etc. Materials can be posted incrementally across runs.

 **Document Revised / Replaced**

UPDATE

Library Item
new URL, file, or version

UPDATE

Event (if document is linked to an event)

NEWSREEL & KNOWLEDGE ADMIN PUSH

 **Human review required** — nothing is pushed automatically. Dashboard "Publish" button is the gate.

 **Meeting Recording Available**

Transcript generated → chunked by topic (stored in S3, not Bubble)

 **Document Relevant for Content**

Document extraction agent runs → metadata extracted

NEWSREEL

Chunks → Newsreel backend
after human approval

UPDATE

Library Item
add extracted metadata

NEWSREEL

Document → Knowledge Admin
after human approval
